

# Peak App Performance With Zero Wasted Spend

ControlUp for Apps offers real-time monitoring, full-stack SaaS visibility, and license and usage insights—all from one platform.

## See Your Entire SaaS Environment at a Glance

You can't manage what you can't see. ControlUp gives IT teams complete visibility into every app running across your organization, managed or shadow, PC or macOS, so IT can always know what's running, what's authorized, and what it costs.

## Spot App Issues Before They Impact Users

Real-time performance monitoring is the difference between catching issues early and doing damage control. ControlUp pinpoints whether issues are local, network-related, or app-wide in seconds, and offers real-time insights into app performance and monitoring metrics.

## Know What You're Paying For, and What You're Not

Without visibility into actual license utilization, IT teams overpay for unused seats, struggle to forecast costs, and are ill-equipped to right-size tiers before renewal. ControlUp puts real-time usage data at your fingertips so that every licensing decision is backed by intelligence, not guesswork.

## Key Features

### License Inventory Dashboard

Detailed view of seats purchased vs. seats used

### Granular Usage Data

Performance breakdown by user, browser, location, and device

### App User Journey Visualizer

See exactly how employees move through every app

### Proactive Alerting

Receive immediate notifications for slow downs and outages
