

ControlUp brand style guide

January 2022

Core elements

Powering the work from anywhere world.

This system of foundational elements allows the ControlUp brand to stretch, while maintaining consistency across all media and print platforms.

Protected space & contrast

Our logo is the number-one visual element of our identity. Proper use of the logo is vital to ensuring recognition for the ControlUp brand.

Our logo consists of two components: the symbol (graphical bars), and the company name. The symbol is a visual expression of our monitoring abilities, as well as our essence of collecting and representing customers' data.

We rarely disconnect the symbol from the company name; they are almost always presented as a single element.

Protected space is essential to keeping the logo visible and clear.

The distance for any graphic object next to the logo should be no less than the height of the logo

On-screen minimum size

Print minimum size

Logo contrast

As we introduce gradients to our brand palette, we recommend using the ControlUp logo in black or white, and occasionally in grayscale or color when appropriate.

Always meet a 4.5:1 minimum contrast between the logo and its background to comply with accessibility requirements.

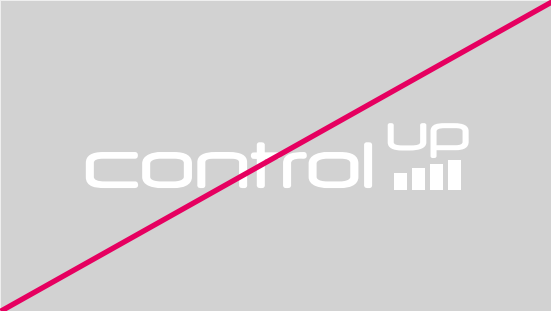

White or light neutral backgrounds are preferred, but you may also place the reverse logo on dark backgrounds.

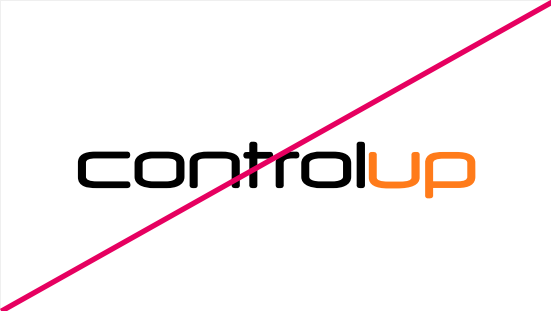

Logo don'ts

Don't alter the fill of the logo that has not been approved by brand.

Don't use backgrounds with low contrast.

Don't alter any elements of the logo.

Don't rotate the logo.

Don't distort the length or width of the logo.

Don't use drop shadow and/or other special effect on the logo.

Don't add any additional text to the logo.

Don't place the logo over busy backgrounds.

Typography

Poppins is our easy-to-read typeface. Poppins comes in four approved weights. However, for simplicity, most ControlUp brand assets will focus on just two font weights: **Poppins Light** and **Poppins Semibold**. The other font weights can be use on a case-by-case basis.

Header line spacing should be set to ‘single’ spacing. Body line spacing should be set to ‘Multiple at 1.2 spacing.

Color palette

Primary colors help audiences quickly identify the ControlUp brand. These are the core creative colors of our brand. Our primary colors also represent two of the three colors used in our gradients.

Secondary color highlights and compliments primary colors. This is also the third color used in our gradients.

Tertiary color is the third level of our color palette. It is not used often but can add diversity to the palette. Charts, graphs and links are examples of how both secondary and tertiary colors can be used.

Base colors are used mostly in text and backgrounds. These colors help with spacing and support primary and secondary colors.

Gradients are to be used creatively and intentionally. Don't overuse them.

PRIMARY

Pink
HEX #E60060
RGB 230, 0, 96
CMYK 0, 90, 53, 10
PANTONE Rubine Red C

Yellow
HEX #FFB800
RGB 255, 184, 0
CMYK 0, 28, 100, 0
PANTONE 7549 C

SECONDARY

Orange

Gradient 2

Gradient 3

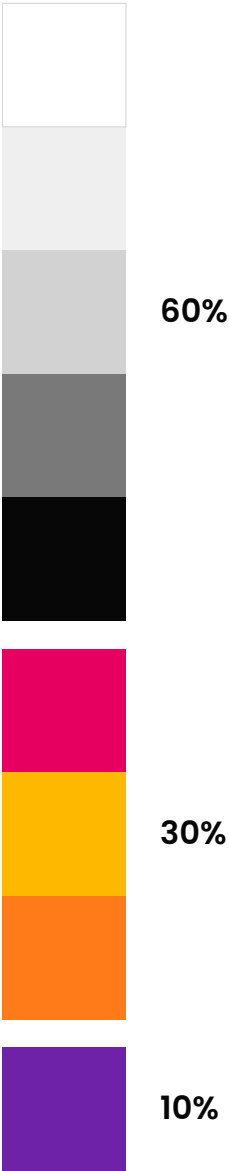

Color palette ratio

Color usage ratio is mapped out on the right. ControlUp’s visual brand ratio should be mostly white and/or grey at 60%. Accent colors – pink, yellow and orange – should be used intentionally and only 30% of the time. Purple should be used very minimally at 10%. Avoid using too much color, unless it is called for.

Type and background combinations must meet a minimum 4.5:1 contrast ratio to help ensure people of all abilities can access and understand our communications.

Pick colors carefully and avoid relying on color alone to convey information. Always provide text or other graphical cues to guide audiences to our message.

[You can check color contrast online here →](#)

**Minimum
4.5:1 contrast**

Creative element

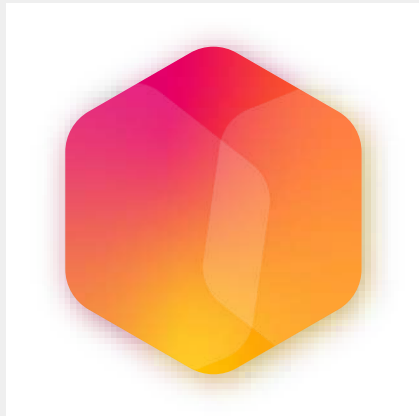

Hexagon used with photography.

Hexagon used as a white outline.

Hexagon used as a gradient outline.

Hexagon used as a gradient.

Hexagon used as an overlay over a gradient.

Shape, glow, and shadow effect

Hexagon shape

When re-creating the shape, make sure it is sized at 528 x 610 pixel then round corners at 82 px.

When scaling to enlarge or shrink shape, make sure to keep the height-width ratio the same.

Glow effect

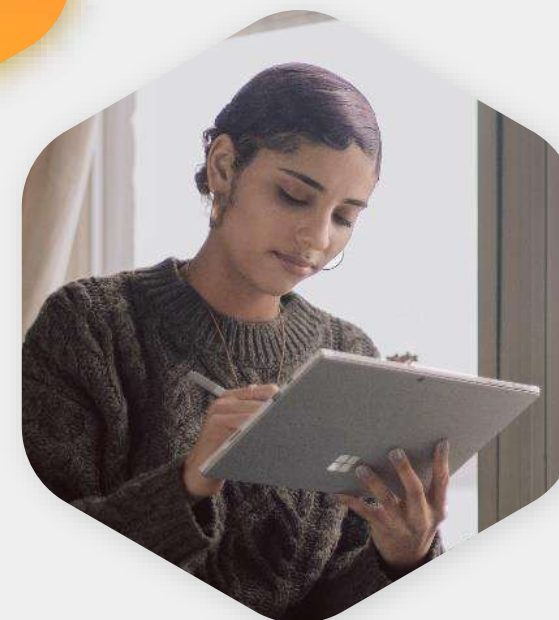

Glow should only be applied to the hexagon with a gradient fill. It should mimic the edges of the shape's colors. Pink edges should have a pink glow and yellow edges should have a yellow glow.

Drop shadow effect

Drop shadow should be soft and used lightly.

525 x 610 px

Corners: 82 px

Photography

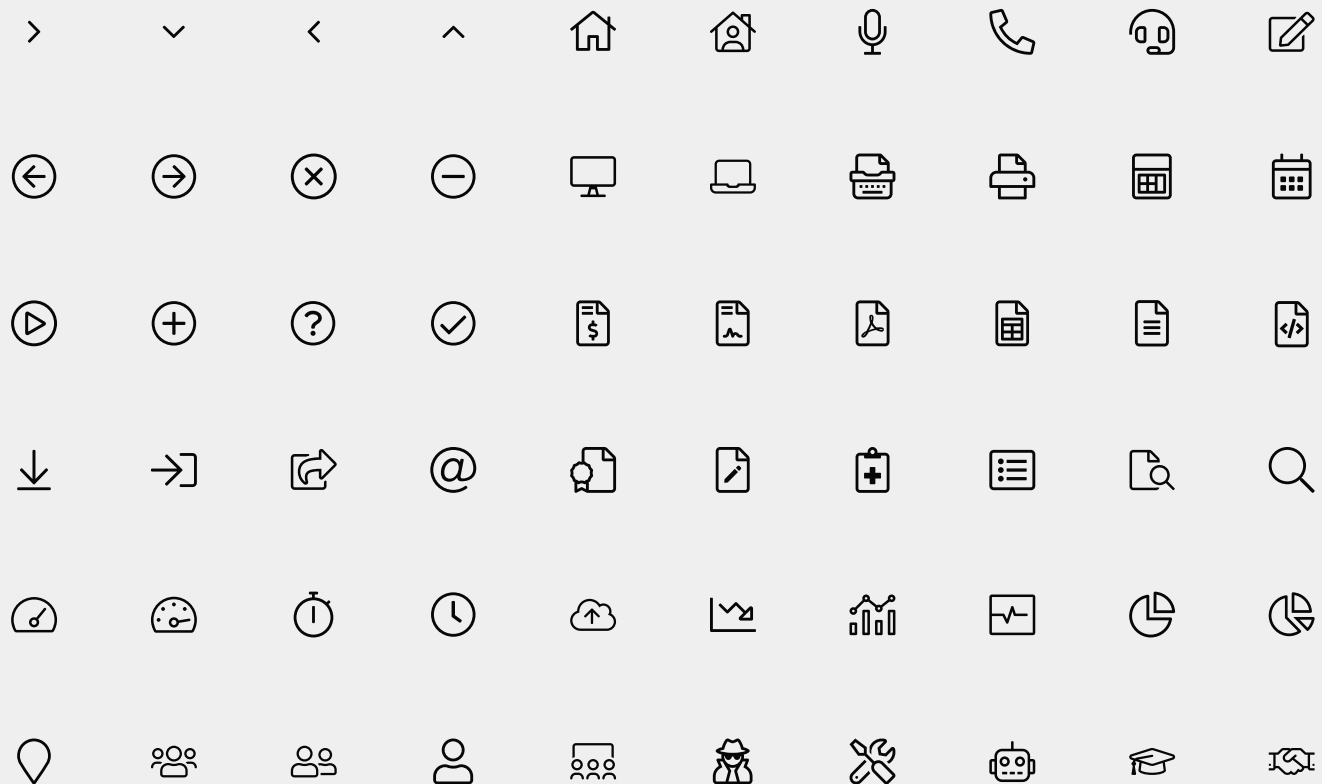

Here are examples of **work from anywhere** photography. Use photos that show diversity and aren't too posed. The key takeaway from the images should be that people have the freedom to work from anywhere in the world. Background locations help emphasize this point.

Icons

To keep a consistent look and feel of our brand, we will be using Font Awesome across all platform – Website, PowerPoint, and other graphical materials.
