

# Migrate to Windows 365 Without the Manual Effort

Simplify your transition from AVD to Windows 365 Cloud PC using ControlUp's free, automated migration tool that handles the heavy lifting for you

## THE CHALLENGE

IT teams are continuously navigating the challenge of managing hybrid work environments that demand flexible, scalable, and highly available desktop solutions. While many organizations are adopting Windows 365 Cloud PCs to meet these needs, migrating existing Azure Virtual Desktop (AVD) or Azure VM images is often a high-risk and time-intensive manual process. Traditional migration methods often lead to costly delays and potential risks to virtualized desktop infrastructure.

## THE SOLUTION

ControlUp Migrate for Windows 365 offers a powerful, free solution that replaces hundreds of manual IT hours with a guided, automated workflow. Built on Microsoft's migration API, the tool transforms complex, multi-step projects into streamlined deployments by handling all necessary prerequisites and configurations automatically.

Even better, once Windows 365 is integrated into the ControlUp DEX platform, ControlUp offers deep, real-time visibility and specialized support for Intune and Microsoft Teams, allowing IT teams to manage their entire hybrid estate from a single pane of glass. This unified approach enables proactive troubleshooting and automated remediation, which reduces help desk tickets and ensures a high-performance experience for every user.

## BENEFITS

- ✔ **Reduce Total Cost of Ownership**  
Lower the transition costs to Windows 365 by replacing hundreds of manual IT hours with an automated, free, API-driven workflow.
- ✔ **Ensure Zero User Disruption**  
Keep your migration on track and your users productive with a streamlined deployment process that eliminates the human error and delays typical of traditional migrations.
- ✔ **Gain Immediate Visibility**  
Seamlessly integrate new Cloud PCs into your organization for unified, real-time monitoring and management of the digital employee experience from day one.

## FEATURES

- ✔ **Intelligent VM Selection**  
Admins can easily select existing Azure Virtual Desktop instances, Azure VMs, or upload custom VM images for the migration process.
- ✔ **Comprehensive Compatibility Validation**  
The tool performs deep validation directly on VM disks to check for Windows 10+ compatibility, detect incompatible agents, and confirm OS disk configurations before the migration begins.
- ✔ **Automated API-Driven Workflow**  
The service uses Microsoft's Windows 365 migration API to handle the entire migration process automatically, reducing human error and manual complexity.
- ✔ **Real-Time Status Tracking**  
IT teams can monitor the progress of their transition with real-time status tracking of individual migrations throughout the migration workflow.
- ✔ **Seamless Management Integration**  
Once migrated, new Windows 365 Cloud PCs integrate into your ControlUp organization with no additional configuration, providing instant visibility into performance and digital employee experience.
